Vision Accomplished

ELCAN Optical Technologies (A Raytheon Company) is proud to have been selected by the Marine Corps Systems Command as the provider for the U.S. M.C. Medium Range Thermal Bistatic (M3T1) program. The new M3T1 solution is based on ELCAN’s battle proven, commercial off the-shelf PhantomIR currently in service with the US Army. It will provide enhanced thermal imaging capabilities to the Marine Riefe Squad and other Marine Corps units engaged in critical offensive and defensive operations.

The U.S. Marine M3T1 product by ELCAN features the latest un-cooled Raytheon IR detector technology, IR laser marker, image and video recording, plus precision ELCAN optics to provide extended range performance. It has a lightweight, comfortable feel and extended battery life essential for all-night operations. ELCAN is proud to support the Marine Corps with this new capability.

- Certified MIL-STD-810F

Getting Stronger

The Army National Guard is more capable than ever, but with added investment, we can be even more so.

Fueling Debate

The Air National Guard can be the solution to what ails the Air Force, but only if we make a good case.

Priorities

Before calling on Congress, NGAUS must separate the most urgent needs from a long list on unfunded requirements.

What has NGAUS Done For You Lately?

Recent accomplishments are only the latest in a long list of victories in 130 years of work with Congress.

Budget Weight

The new administration released a defense 'top line,' but a delay in details is causing concern.
